Abstract of JP2001043177

PROBLEM TO BE SOLVED: To automatically determine a server which is managing a printer driver of the latest version corresponding to the kind of a printer when a printer driver is revised to the latest version. **SOLUTION:** With a command that a Core command control part 401 issues to a printer, internal information stored in an internal memory of the printer is obtained and a command for obtaining the printer driver of the latest version is issued to the server specified with the obtained internal information; and the printer driver of the latest version of the matching machine name stored on the specified server is obtained and stored in the internal memory 404; and a non-Core part 405 holding the existent printer driver is replaced by a Core command part 403 with the printer driver of the latest version stored in the internal memory 404.
